

TECHNICAL IMPROVEMENT PROGRAM

Dual Feed

● Run a Dual Stream of Labels & Board

TIP EM.10001

Machine Model for the Improvement:

Model EM Serial # 32+

Description of Improvement:

The Dual Label portion consists of additional label side guides, backstop, hold down assembly, and support brackets. This option will allow two label streams to feed simultaneously. One common lead edge for the two labels is required. Maximum label size is reduced accordingly. Space is required between label streams. Additional restrictions may apply.

The Dual Board portion will provide the necessary parts to double the board position across the machine and guide it at the board feeder and the down stacker. The option consists of, but is not limited to the following: board feed front side guides, rear board feeder side guides, support brackets, table clamps, hold down brackets, down stacker side and rear supports.

Reasons for this Improvement and Benefits:

Increase profitability by reducing run time with increased product output. Complete an order in half the time it would take without the Dual Feed TIP.

Prerequisites:

No programming changes would be required for the upgrade!

Requirements:

Installation: 1 day
